Implementation according to individual requirements

Exterior instruction

Call or send your vertical lift to the desired position. Optional with Eurokey or lock type to your choice.

Hand-held remote control

Enables the lift to be controlled within close proximity.

Optional accessories for additional comfort

Variable basket, cabin and shaft size

When having narrow space we adapt your construction individually to the available space circumstances.

Loading ramp

Minimize your on site performance and trust in our moveable loading ramp, which provides a barrier-free access without a lift hole.

Emergency drop

Optional this model can be equipped with an automatic, battery-operated emergency drop, which transports the construction downward in case of power failure.

Folding seat

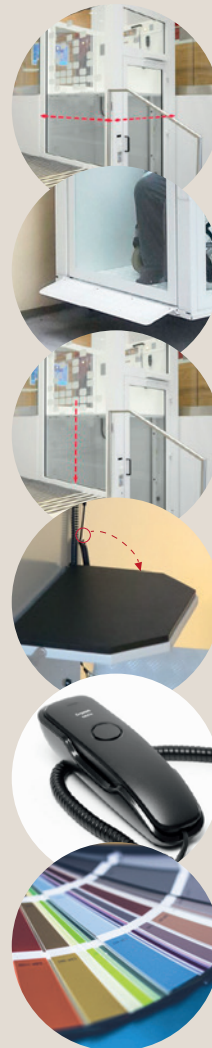

To extend the platform lift to make the ride more enjoyable

Emergency facility

Optional there is the possibility of integrating a tethered or via GSM technique equipped telephone in the chassis.

Color choice

In a traffic white (RAL9016), stainless steel or in RAL colours at choice the lifting ramp is integrated in its environment.

maximum platform size
1400 x 1100 mm

385 kg load

maximum speed 0,15 m/s

rack and pinion drive

Enjoy unlimited independence

Materials of highest quality, innovative technology, the pleasing and flexible designs guarantee highest comfort and reliable security of all our products.

Examples of the flexible vertical platformlift for the inner and outdoor area with perspective

GHB20 OV

Fixation to wall

For lifting heights up to 3m by a half-high chassis at the platform.

For lifting heights up to 3m by a half-high chassis at the platform.

GHB20 KV

Fixation to wall/fixation on consoles

For lifting heights up to 12m by a closed cabin at the platform.

GHB20 SV

Four-sided shaft, free-standing

Aluminium-glass shaft optionally with a glass pane or panels for lifting heights up to 12m.

GHB20 SV

Three-sided shaft, fixation to wall

Aluminium-glass shaft implemented with a half-high door in the upper level for lifting heights up to 3m.

GHB20 SV

Three-sided shaft, fixation to wall

Aluminium-glass shaft with a thermally insulated door in the living area for lifting heights up to 12m.

Implementation according to your wishes

It is our task to find for even complex situations a suitable upward mobility. With the help of a flexible modular construction system we can react fast and uncomplicatedly to nearly every situation. We are looking forward to new challenges.

The king of lifts

We bring you rapidly to the top without complications with our flexible solutions which aim to meet individual personal needs and requirements.

Towards the sun

From a range of different colours of varnishes to the adaption of the lift to meet constructional requirements, our in house technicians will uniquely assemble the desired product. We guarantee a pleasing appearance and a high-quality service that meet your expectations.

Successful for 50 years

Due to the steady development and the reliable production of our various lift systems, we have acquired the status as pioneers in this field over the past half-century.

Hence, we are very proud that all of our platform lifts, lifting ramps, home lifts and vertical lifts

correspond to the European Safety Standards and are TÜV certified. Thus we do not only offer our customers special solutions, which are adapted to fit any architectural requirements and personal desires, but also great comfort and long-lasting reliability.
